

Arjun Besetti

Principal DevOps & Platform Engineer

Hyderabad, TG 500018 | 988-557-7285 / +91-7569628698 | vmsnivas@gmail.com

With a diverse skill set and extensive experience of over 15 years in DevOps, cloud, containers, and automation, I am well-equipped to drive continuous improvement and innovation in software development and operations processes.

- **DevOps Practices:** Demonstrated expertise in implementing DevOps methodologies to enhance collaboration between development and operations teams, resulting in accelerated software delivery cycles and improved quality.
- **Cloud Infrastructure:** Extensive experience in building, configuring, and managing cloud-based infrastructure on platforms such as AWS and Google Cloud Platform (GCP). Proficient in leveraging cloud services for scalability, reliability, and cost-efficiency.
- **Containers and Orchestration:** Strong proficiency in containerization technologies including Docker and container orchestration platforms such as Kubernetes and Apache Mesos. Skilled in designing, deploying, and managing containerized applications for efficient scaling and deployment.
- **Automation Tools:** Advanced knowledge and hands-on experience with automation tools such as Ansible and Terraform for infrastructure provisioning, configuration management, and deployment automation.
- **CI/CD:** Extensive experience in implementing CI/CD pipelines using Jenkins, TeamCity, and Octopus Deploy. Skilled in automating build, test, and deployment processes to achieve continuous integration and delivery.
- **Scripting and Programming:** Strong programming skills in Python and Bash scripting for automation, tooling, and infrastructure management tasks.
- **Monitoring and Logging:** Proficient in implementing Application Performance Monitoring using Dynatrace and logging solutions using Splunk, Sumo Logic, and others to ensure visibility, reliability, and performance optimization.

SKILLS

AWS	Terraform	Ansible	Jenkins	Docker	Kubernetes	Python	Bash
-----	-----------	---------	---------	--------	------------	--------	------

WORK HISTORY

Vice President – Lead Software Engineer2024-07 – Current

Wells Fargo, Hyderabad, Telangana

- Leading and mentoring a cross-functional engineering team in designing and delivering a self-service Observability onboarding platform, enabling application teams to independently integrate with enterprise observability tools with minimal friction.
- Architected and drove the end-to-end strategy for the Observability Self-Service product, aligning technical roadmap with business objectives and stakeholder requirements.
- Automated the build, provisioning, and repaving of Splunk infrastructure components — including Search Heads, Indexers, and Deployment Servers — as well as Cribl worker nodes, using Ansible and Python, significantly reducing manual effort and configuration drift.
- Designed and implemented automated resiliency and Disaster Recovery (DR) failover workflows using Ansible, ensuring high availability and rapid recovery of critical observability infrastructure.

- Automated end-to-end deployment and application onboarding processes using Ansible, streamlining integration of new services into the observability ecosystem.
- Engineered an automated soft data deletion framework using Ansible and Python to handle sensitive and personally identifiable information (PII) within Splunk, ensuring compliance with data governance and privacy policies.
- Collaborated with senior leadership and architecture teams to define standards, best practices, and governance frameworks for observability tooling across the enterprise.
- Provided technical guidance and architectural oversight to team members, conducting code reviews and driving adoption of DevOps and automation best practices.

Associate Vice President – Senior Infrastructure Developer

2018-09 – 2024-07

JP Morgan Chase & Co, Hyderabad, Telangana

- Implemented cross-environment observability using Dynatrace Managed between public cloud and on-premises infrastructure, providing unified visibility across hybrid environments.
- Successfully led and executed the migration of Dynatrace Managed from on-premises infrastructure to AWS Cloud, ensuring zero-downtime transition and improved scalability, resilience, and operational efficiency.
- Configured Dynatrace ActiveGate infrastructure in public cloud using Terraform, AWS EKS, and Spinnaker, enabling seamless monitoring of cloud-native workloads.
- Automated SSL Certificate renewal and deployment, eliminating manual intervention and reducing certificate-related outage risks.
- Automated Dynatrace Managed Server installation, manual upgradation, and Premium High Availability implementation processes, improving operational consistency and reducing downtime.
- Automated Site Resiliency and DR Failover activities for Splunk, Dynatrace, and Wily, ensuring rapid recovery and business continuity.
- Collaborated with Machine Learning teams by providing key data points for incident segregation, gathering and classifying incident data into noise, threshold adjustments, and automation opportunities.
- Prioritized customer-facing application incidents and proposed automation opportunities to respective teams, identifying and enabling resources with automation skills.
- Delivered training sessions on Automation and DevOps practices to upskill team members and foster a culture of continuous improvement.

Senior System Engineer

2017-07 – 2018-09

ATMECS Technologies, Hyderabad, Telangana

- Automated Hotfix release process in legacy Windows environment.
- Worked closely with customers, internal staff, and stakeholders to determine planning, implementation, and integration of automation requirements.
- Proposed technical feasibility solutions for new system designs and suggested options for performance improvement of technical components.
- Orchestrated hotfix release process using TeamCity, Octopus Deploy, and PowerShell scripts.
- Automated CI/CD pipelines using Jenkins, TeamCity, Octopus Deploy, Chef, and Ansible.
- Researched and prepared migration plans for migrating on-premises web applications to AWS.
- Researched and prepared POCs on Infrastructure as Code (IaC) for infrastructure provisioning.

Senior CloudOps Engineer

2014-05 – 2017-07

INDMAX IT SERVICES, Hyderabad, Telangana

- Participated in continuous improvement by generating suggestions and engaging in problem-solving activities to support teamwork.
- Automated FTP account creation and errored transaction ticket handling processes.
- Automated process of updating daily errored transaction metrics into Zoho for reporting.
- Automated disk space issue handling and container scaling using Marathon APIs based on queue infrastructure alerts.
- Maintained codes and scripts in version control using GitHub.
- Maintained Java-based applications in Docker containers; managed Docker containers and clusters using Mesos and Marathon.
- Troubleshoot customer-raised issues and managed FTP accounts.

Senior Network Engineer

2011-07 – 2014-05

Raj Services, Visakhapatnam, Andhra Pradesh

- Supported network infrastructure and troubleshoot network connectivity issues.
- Assisted with installing, supporting, and maintaining new hardware and software infrastructure.
- Supported in-house computers and LAN running Windows.
- Primary resource for network troubleshooting, support, and recommendations.

Computer Hardware Service Engineer

2009-01 – 2011-07

New Generation Computer Services, Visakhapatnam, Andhra Pradesh

EDUCATION

2006-07 – 2008-05 **Master of Science: Electronics**

Andhra University – Visakhapatnam

CERTIFICATIONS

2025-01	Certified Kubernetes Administrator (CKA)
2023-10	AWS Certified Solutions Architect – Associate
2020-09	Splunk Enterprise Certified Admin
2019-06	Splunk Core Certified Power User
2012-08	Red Hat Certified Engineer (RHCE)
